

ONLINE JOB PORTAL MANAGEMENT SYSTEM

A Mini-Project submitted for the partial fulfillment of Database
Management System Laboratory (CS14204)

by

Thani Karthik

Roll Number: - B220036CS

2nd Year B.Tech (CSE)

Under the Supervision of

Dr. Sangram Ray

Associate Professor

Department of Computer Science and Engineering
National Institute of Technology Sikkim
Ravangla-737139, Sikkim

May 2024

CERTIFICATE

This is to certify that the project report entitled “**Online Job Portal Management System**” submitted by **Thani Karthik** bearing Roll No. **B220036CS** is an authentic report for the work carried out under my supervision as a part of Database Management System Laboratory during the Fourth Semester, 2024 at National Institute of Technology Sikkim, Ravangla-737139, Sikkim.

Dr. Sangram Ray

Associate Professor

Department of Computer Science and Engineering

National Institute of Technology Sikkim

Ravangla-737139, Sikkim, India

ACKNOWLEDGEMENT

First and foremost, I would like to express my deepest gratitude to my supervisor, **Dr. Sangram Ray**. It has been an honor for me to do a project under his supervision and sincerely thank him for his excellent guidance, support and motivation in every step throughout the whole period of my project. I specially thank everyone, for their valuable support, patience, critical comments and detailed review during the period of my project. They always inspired me, willing to help and give their best suggestions. I am indeed grateful to all the faculties, Ph.D scholars and staff of the Computer Science Department for providing an environment conducive to my project. Finally, I would like to thank God Almighty for giving me the strength, knowledge, ability and opportunity to undertake this project study and to persevere and complete it satisfactorily.

Thani Karthik

ABSTRACT

The aim of this project is to develop an online search Portal for the Placement Dept. of the college. The system is an online application that can be accessed throughout the organization and outside as well with proper login provided. This system can be used as an Online Job Portal for the Placement Dept of the college to manage the student information with regards to placement. Students logging should be able to upload their information /Company representatives logging in may also access/search any information put up by Students. The project has been planned to be having the view of distributed architecture, with centralized storage of the database. The application for the storage of the data has been planned.

CHAPTER - 01 INTRODUCTION

This project is aimed at developing an online search Portal for the Placement Details for job seekers. The system is an online application that can be accessed throughout the organization and outside as well with proper login provided. This system can be used as an Online Job Portal for job seekers. Job Seekers logging should be able to upload their information /Company representatives logging in may also access/search any information put up by Job aspirants.

Main features are:

1. Recruiter Management
2. Jobseeker Management
3. Admin Management **Objectives:**
 1. Add or update Job details
 2. View posts
 3. Apply the jobs
 4. View applied candidates
 5. User login
 6. Recruiter login
 7. Admin login

CHAPTER - 02

SYSTEM SPECIFICATIONS

A good Online Job Portal Management system requires integration and use of modern technologies such as HTML,CSS, and Mongdb.

2.1 HTML

The Hypertext Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser.

2.2 CSS

This is used for styling purposes. HTML coding is just a structure and CSS is applied to dictate the look and feel. Font size, font color, font style styling of images, page layout, and more are determined by CSS.

2.3 MongoDB

MongoDB is used as a database for our project to store or modify data. It has commands that can be used to interactively work with a database or can be embedded within a script or programming language as an interface to a database.

2.4 VSCODE

Visual Studio Code (VSCode) is a sleek, free, and feature-rich code editor widely favored for its versatility and customizable interface.

DATABASE DESIGN

6.1 User signup:

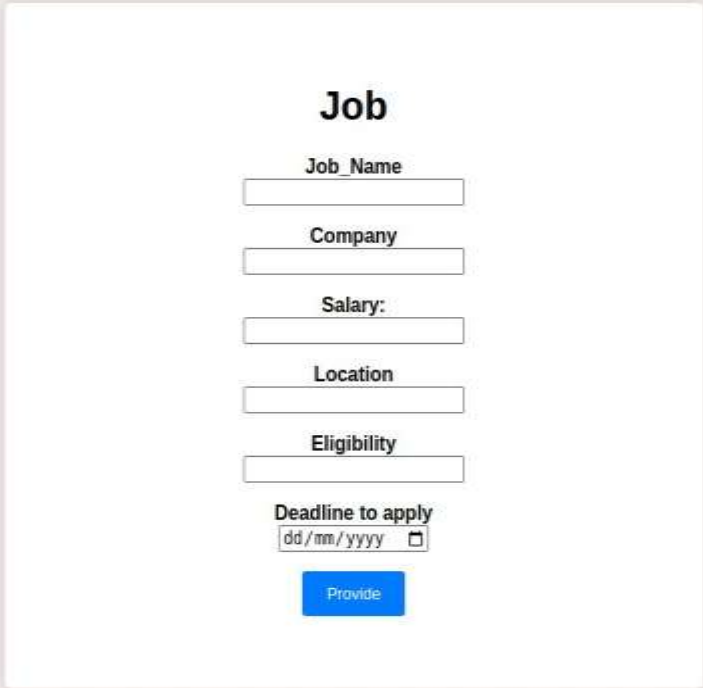

The image shows a user signup form titled "User". The form is centered on a light pink background. It contains the following fields and controls:

- User_type:** A dropdown menu with "Employer" selected.
- user_id:** A text input field.
- Name:** A text input field.
- Number:** A text input field.
- email:** A text input field.
- Password:** A text input field.
- Age:** A text input field.
- Register:** A blue button with white text.

7.6 Searching Job :

The image shows a web form titled "Jobseekers" and "Job" for searching jobs. The form is centered on a light pink background. It contains the following fields and elements:

- Jobseekers** (Section Header)
- Qualification** (Text label above an input field)
- user_id** (Text label above an input field)
- Job** (Section Header)
- Job Name** (Text label above an input field)
- Name:** (Text label above an input field)
- Company** (Text label above an input field)
- Salary:** (Text label above an input field)
- Location** (Text label above an input field)
- Register** (Blue button)

A small arrow points to the left of the "Job Name" input field.

CHAPTER – 08

CONCLUSION & FUTURE SCOPE

The main objectives of Online Job portal management system is to develop a bridge between job seeker and job providing company. Since this is a web-based project therefore candidates can access it over internet which saves their time and money to travel.

The mini project was designed in such a way that future modifications can be done easily. The following conclusions can be deduced from the development of the project.

1. Automation of the entire system improves the efficiency
2. It provides a friendly graphical user interface which proves to be better when compared t the existing system.
3. It gives appropriate access to the authorized users depending on their permissions.
4. It effectively overcomes the delay in communications.
5. Updating of information becomes so easier.
6. System security, data security and reliability are the striking features.
7. The System has adequate scope for modification in future if it is necessary
